Disclosures

For time periods between January 1, 2009 and March 31, 2022, management fees of 0.55% annually, our highest published fee during that period, have been deducted from gross performance results for the IRON High-Q/Fixed Income 50%/50% strategy (“High-Q 50/50”). From April 1, 2022 onward, management fees of 0.50% annually are deducted from gross performance results. Client accounts are charged quarterly in arrears based on the quarter-end value adjusted for capital flows. Net returns reflect a monthly accrued deduction of management fees. IRON’s fees are available upon request and may be found in our Form ADV Part 2A disclosure brochure.

Investments within portfolios, and therefore, portfolios, involve risk and the possibility of loss, including a permanent loss of principal. Performance results are based on a hypothetical model portfolio. From January 1, 2009 through August 31, 2020, performance is calculated as the equal-weighted average of the performance of an IRON High-Quality Equity Strategy (“High-Q”) hypothetical model portfolio and the IRON Core Plus 100% Fixed Income composite. From August 31, 2020 to the present, performance is calculated as the equal-weighted average of the High-Q composite and the IRON Core Plus 100% Fixed Income composite. Performance for periods longer than a year has been annualized using a geometric mean.

Monthly returns of the High-Q hypothetical model, as utilized in the calculation for High-Q 50/50 performance results until August 31, 2020, were computed based on the daily total returns of underlying securities. Model performance does not include trading costs. Performance data for the model assumes reinvestment of dividends but not the effects of taxation or transaction costs. If dividends and interest were not reinvested, then the above results would be considerably different. The model was developed with the benefit of hindsight and the results do not represent actual trading, which may be influenced by real-time market and economic events.

Inclusion of an account within the High-Q composite, as utilized in the calculation for High-Q 50/50 performance results from August 31, 2020 to the present, is determined on a monthly basis, requires investment in the High-Q strategy for the entire calendar month, and a beginning monthly balance of at least \$100,000. Inclusion of an account within the IRON Core Plus 100% Fixed Income composite, as utilized in the calculation for High-Q 50/50 performance results for all time periods, is determined on a monthly basis, requires investment in IRON Core Plus 100% Fixed Income for the entire calendar month, and a beginning monthly balance of at least \$50,000.

The High-Q hypothetical model and the High-Q composite is rebalanced semi-annually.

For High-Q and IRON Core Plus 100% Fixed Income – and therefore for High-Q 50/50 too – actual performance of client portfolios may differ materially due to the timing of investment of capital, the reinvestment of dividends, length of time various positions are held, client objectives and restrictions, and fees and expenses incurred by the individual portfolio.

The S&P 500 Index is a market-capitalization-weighted index of 500 of the largest publicly traded companies listed on US stock exchanges. The S&P 500 Total Return Index was determined to be an appropriate benchmark for the equity allocation because the equity holdings are selected from the S&P 500. The S&P 500 Total Return Index is shown for comparison purposes because we feel it is more well understood by investors than a blended benchmark and would therefore better allow investors to compare and contrast various characteristics, such as volatility measures. Benchmark returns do not reflect the deduction of advisory fees. You cannot invest directly in an index.
