## Disclosures

---

For time periods between January 1, 2009 and March 31, 2022, management fees of 0.55% annually, our highest published fee during that period, have been deducted from gross performance results for the IRON High-Q/Fixed Income 50%/50% Portfolio (“High-Q 50/50”). From April 1, 2022 onward, management fees of 0.50% annually are deducted from gross performance results. Client accounts are charged quarterly in arrears based on the quarter-end value adjusted for capital flows. Net returns reflect a monthly accrued deduction of management fees. IRON’s fees are available upon request and may be found in our Form ADV Part 2A disclosure brochure.

Investments within portfolios, and therefore, portfolios, involve risk and the possibility of loss, including a permanent loss of principal. Performance results from January 1, 2009 through March 31, 2021 are based on a hypothetical model portfolio. Performance results since April 1, 2021 are based on a composite. Inclusion of an account within the composite is determined on a monthly basis, requires investment in High-Q 50/50 for the entire calendar month, and a beginning monthly balance of at least \$200,000. Performance for periods longer than a year has been annualized using a geometric mean. High-Q 50/50 is rebalanced semi-annually. Actual performance of client portfolios may differ materially due to the timing of investment of capital, the reinvestment of dividends, length of time various positions are held, client objectives and restrictions, and fees and expenses incurred by the individual portfolio.

The S&P 500 Index is a market-capitalization-weighted index of 500 of the largest publicly traded companies listed on US stock exchanges. The S&P 500 Total Return Index was determined to be an appropriate benchmark for the equity allocation because the equity holdings are selected from the S&P 500. The S&P 500 Total Return Index is shown for comparison purposes because we feel it is more well understood by investors than a blended benchmark and would therefore better allow investors to compare and contrast various characteristics, such as volatility measures. Benchmark returns do not reflect the deduction of advisory fees. You cannot invest directly in an index.

“AGG” refers to the iShares Core U.S. Aggregate Bond ETF, which seeks to track the investment results of an index composed of the total U.S. investment-grade bond market.
